FIND YOUR LIGHTROOM VERSION

Firstly, it's important to identify the version of Lightroom you're using, as different versions may require different steps. There are a couple of methods to determine your Lightroom version. Just open the Lightroom application on your computer and either:

- Click on 'Lightroom' followed by 'About Lightroom,' or
- Click on 'Help' and then select 'System Info.'

Both approaches will reveal the precise version of Lightroom you're using.

AFTER YOU KNOW YOUR LIGHTROOM VERSION

Lightroom Classic 7.3+ (.XMP Lightroom Preset files on this version)

- The most best version of Lightroom, designed for professional photographers.
- Available for Windows and macOS.

Lightroom (.XMP Presets files - Cloud-based version) - CC Version

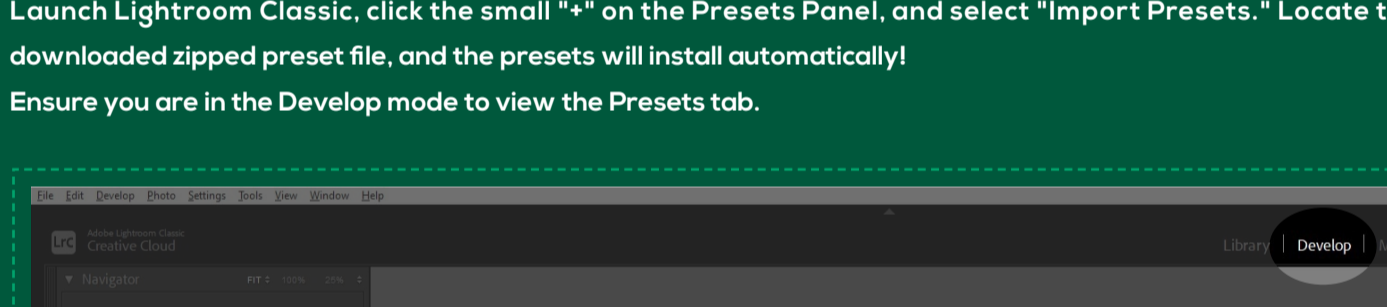

- A newer, streamlined version of Lightroom, focused on a cloud-based workflow.
- Offers automatic photo syncing across devices and easy sharing options.
- Available for Windows, macOS, iOS, and Android.

Lightroom 4,5,6 - older version (.LRTEMPLATE Presets files)

- A newer, streamlined version of Lightroom, focused on a cloud-based workflow.
- Offers automatic photo syncing across devices and easy sharing options.
- Available for Windows, macOS, iOS, and Android.
